Continuation of 5. Applicants' argument is not persuasive. As to the section 112 first and second paragraph rejections, the Examiner has carefully studied the identified excerpts. The Examiner is unable to find the support of the claimed invention in those excerpts identified by Applicants. For example, the identified excerpts fail to explain what packaging means, how the deployment descriptor is packaged into the resource adapter, what "deploying the resource adapter into a target operational environment based on properties defined in the deployment descriptor" means, how that is being done and how the packaging step and the deploying step together would provide a resource adapter that collaborates with an application server to provide services offered by an enterprise information system as claimed. As to the art rejection, the applied arts clearly meet the claimed limitations given the broadest interpretation of the claims. Further, limitations in the specification should not read into the claims.

The excerpts are not clearly identified in the specification because there are no line numbers in each page and because some of the pages have amendments such as deletions and insertions, and some paragraphs have different line space separations.
